DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: The Examiner questions if reference number 121 (page 9, line 20) should be reference number 158 (see Fig. 1).

Appropriate correction is required.

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: Reference number **131** does not appear to be disclosed in the specification.

A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The applicant is required to provide a copy of the drawings with proposed drawing changes marked in red ink as required by 37 CFR 1.121(d).

Claim Objections

Claim 11 is objected to because of the following informalities: Instead of the semicolon, a "period" should be placed at the end of the claim (e.g. input signal [;].). Accordingly, the word "and" should be placed before "a coupling".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

Art Unit: 2817

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 11 is rejected under 35 U.S.C. 102(b) as being anticipated by Gu et al. (US Patent No. 5,689,217).

Claim 11:

Gu et al. (best illustrated by Fig. 6) shows a microstrip coupler comprising: an input microstrip conductor (514) configured to carry an input signal; a central microstrip conductor (522) proximate the input microstrip conductor and separated from the input microstrip conductor by a first gap (gap shown in Fig. 6); an output microstrip conductor (516) proximate the central microstrip conductor and separated from the central microstrip conductor by a second gap (gap shown in Fig. 6); a coupling microstrip conductor (528) for coupling at least a portion of the input signal.

Allowable Subject Matter

Claims 1 – 10, 12 and 13 are allowed.

The prior art of Bales shows first and second coupling conductor (6,7) but does not show a central microstrip conductor and the second or third microstrip conductors placed on either side of the central conductor, thus independent claims 1, 6, and 12 and the dependent claims therein are found in condition for allowance.

Conclusion

Art Unit: 2817

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ruelke – shows a multi-layer bi-directional coupler.

Iwer – shows a microstrip coupler with capacitor bridges.
